

MELAMINE FACED PANEL AND LAMINATE

The melamine surfaces are the most resistant among those used in the furniture field. In case of persistent or dry stains, it is recommended to use water, soapy water or ethylic alcohol and acetone according to the following table:

	Cold water	Cold water and detergent for domestic use	Hot water and detergent for domestic use	Alcohol 50%	Acetone
Fruit juice, marmalade, syrup, milk, tea, coffee, liqueurs, wine, soap, ink	X				
Fats, sauces, dry blood stains, wine and liqueurs, eggs		X			
Jelly, carbon black, vinyl glue, watercolours, organic waste			X		
Vegetable oil, pens, magic markers, foundation make-up, hair spray				X	X
Nail polish, linseed oil					X

Smooth or slightly embossed surfaces

It is recommended that you avoid spraying products directly onto the surface, as this may leave stains and marks; instead, it is preferable to apply the detergent product on a soft damp cloth, clean the surface and then rinse it. Avoid using abrasive products, bleach or highly chlorinated products or acids.

Deeply embossed surfaces

Clean with a soft cloth using the aforementioned solvents, as per the above table.

In case of deep surfaces and very light colours, the aforementioned cleaning procedure may be inadequate or insufficient in order to remove the dirt from the furrows of the deep surfaces. In this case, it is recommended to delicately clean that area, by using a melamine magic sponge: wet the sponge with tepid water and squeeze it. Avoid using abrasive sponges, as they may damage the surface.
